# Porous Cylinder

Porous titanium cylinder to support areas with bone loss.

## HOW TO USE

The porous titanium cylinder can be used in cases where it is necessary to provide a mechanical support where there is a loss of bone substance.

## SOLID STRUCTURE

Thanks to its structure it can act as a vector for biostimulatory tissues, such as spongy bone, PRP, stem cells, BMP.

## ACCESSORIES

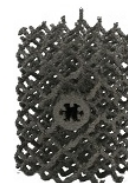

It can be stabilized to a synthesis medium such as a plate by means of a 1.5 mm screw.

20 mm Ø 8 mm porous cylinder

20 mm Ø 12 mm porous cylinder

20 mm Ø 16 mm porous cylinder

**Jednotná cena pre všetky priemery: 70 €/ks**
